The GNU Hackers Meeting 2013

GNU in 60 seconds

- A software is free software if you can:
    - 0: run it, for any purpose
    - 1: modify it
    - 2: distribute literal copies
    - 3: distribute modified copies

- GNU is a project to develop a free software operating system
    - mature and functionally "complete"...
        - including pieces from other projects (notably the kernel, Linux)
    - ...but **still growing**

The GNU Hackers Meeting 2013

The GNU Hackers Meeting 2013

This is the seventh edition (depending on how we count...)

- Wide following, lots of interest
  - 17 talks over two full days
  - > 40 registrations
  - remote speakers: two pre-recorded talks with live Q&A
- Free software is important
  - recent mass-surveillance scandals
  - people getting burned by "cloud" services
  - mobile phones mostly non-free
- GNU will be 30 this coming September
  - what's been accomplished
  - new challenges

Thanks to IRILL, which is hosting us for the second time; and to the friends who helped me behind the scenes: Ludovic, José, Sylvain, Sylvestre, Dodji.
